

Bernoulli label flip (stochastic)

$$y_f \rightarrow (1 - 2B)y_f, \quad B \sim \text{Bern}(\theta)$$

512 shadows, min-max over 9 (train,probe) seed pairs
 stochastic, label only: $\mathbb{E}[\delta y] = -2\theta y_f$, $\text{Var} = 4\theta(1 - \theta)y_f^2$ (max at $\theta = 0.5$)
